

*Are you responsible for the safety and well-being of guests on boats?  
Has a risk assessment been conducted?  
Do you have an up to date "Safety Management Plan" in place?*

Vessel owners & operators have a legal duty of care to ensure the safety of a vessel and its operation.

AMS qualified staff can assess your boats and operation in order to identify risks and develop a tailored safety management plan for your operation to include:

- Risk Identification, Assessment & Management
- Persons of responsibility
- Crew training & Emergency drills
- Procedures for on-board operations
- Emergency preparedness
- Follow-up on hazardous occurrences
- Maintenance of the vessel and equipment
- Review and evaluation

The Safety Management Plan, once implemented, will clearly demonstrate your company's pro-active approach to safety and provide tangible evidence of the precautions you have taken should the sufficiency of your vessel's safety system be brought into question following an incident or accident.

**Don't wait until it is too late.**

Ensure plans are put into place to minimize risk and legal liability.

Contact Anthony, the Principal Marine Surveyor at AMS, to find out how we can tailor a "**Safety Management Plan**" for your vessel operation.
