

QUALITY CONTROL INSPECTIONS (QC'S) FOR YACHT BUILDS

Having AMS conduct a comprehensive Quality Control (QC) inspection of your new yacht during its construction ensures that any identified faults or issues can be corrected by the builder before delivery.

Yachts are intricate, highly customizable vessels, and AMS understands the complexities involved in their build process.

Expert Inspection
During Construction

02.

Customization &
Options Check

03.

Identifying &
Rectifying Faults
Early

04.

Build Quality
Assurance

05.

Smooth Delivery
Process

KEY POINTS OF AMS QC INSPECTIONS

01.

Expert Inspection During Construction:

AMS is engaged by the client—those who commissioned the yacht's build—to carry out detailed inspections at various stages of construction. This ensures the yacht is being built to the highest standards and adheres to all specifications.

02.

Customization & Options Check:

Each yacht build is unique, often including custom features, semi-custom elements, and a range of optional upgrades. AMS ensures that these customizations are properly integrated into the build, confirming that the vessel meets the client's exact specifications.

03.

Identifying & Rectifying Faults Early:

Given the complexity of yacht builds, issues may arise during construction that could affect the overall quality or functionality. By inspecting the yacht at key stages, AMS helps identify any faults early on, allowing the builder to address them before final delivery.

04.

Build Quality Assurance:

AMS not only checks the inclusion of options and custom features but also carefully evaluates the overall build quality. This includes inspecting the structural integrity, finishing, and performance of critical systems to ensure everything operates as intended.

05.

Smooth Delivery Process:

With AMS overseeing the inspection and working closely with the builder to correct any issues, the yacht is more likely to be delivered in excellent condition, free from surprises. This proactive approach provides peace of mind for the client and minimizes delays.
